Climate effects on food−web structure
S >= 10 food webs; mixed models with Region/Source−study random effects
Latitude
Temperature
Seasonality
Connectance
Nestedness (z−NODF)
Mean link strength
Mean closeness
Modularity (Q)
Standardised modularity (z−Q)
Density & nestedness
Modularity
−0.4
0.0
0.4
Standardised effect of moving poleward (95% CI)
(higher latitude | cooler temperature | higher seasonality)
