
a
Niche expansion
slope = 1.02
(1 = pure expansion)
log10 isotopic total area (per mil^2)
Number of taxa (log scale)
b
Niche packing
log10 mean nearest−neighbour distance
slope = −0.28
(0 = pure expansion; −0.5 = pure packing)
Number of taxa (log scale)
c
Climate does not alter isotopic geometry beyond richness (all n.s.)
Total area
Packing ratio (obs/null)
Nearest−neighbour distance
Std. climate effect, richness held constant
Latitude
Temperature
Seasonality
d
Link−species scaling vs latitude
L ~ S^2.33 (2 = constant C)
S x latitude, lentic: −0.040 (p = 0.40)
S x latitude, lotic: 0.052 (p = 0.07)
Number of links (log scale)
Number of taxa (log scale)
Low lat.
Mid lat.
High lat.
