
a
Warm−water fish sit lower in the web
(more omnivory)
slope = −0.009 per deg C, p = 0.067
(richness and effort held constant)
Fish trophic height above other taxa
(d15N difference / 3.4)
Mean annual temperature (deg C)
Lentic
Lotic
b
Lower fish trophic height,
higher isotopic overlap
slope p = 0.019
(richness, effort held constant)
Connectance
Fish trophic height above other taxa
Lentic
Lotic
c
Decomposition of the poleward decline in connectance (piecewise SEM, n = 473)
Seasonality
Temperature
Latitude
Std. effect of moving poleward on connectance (diamond = total)
Direct (foraging / unmeasured)
Via prey niche area
Via taxon richness
Via fish trophic height
